

IS 360 – Project 1

Project 1 due end of day on Sunday March 8th. You may work in a small group on the project.

We'll look together at some of the most interesting student solutions in our office hours on Wednesday March 11th.

1. Imagine that you are hired to create a basic database and a basic report for a school. First, write a one or two sentence description of the school. (some examples: “Dog Obedience School”, “Beauty Academy”, “Lucky Brake Driving School”, “CUNY SPS BSIS program”, etc.
2. You should create and populate tables for Courses and Students. Each table should contain at least four or five rows.
3. Write a SQL Query that shows which students are taking which courses.

The course projects are each worth 100 points, so please start early, and do work that you would want to include in a “presentations portfolio” that you might share in a job interview with a potential employer! There is also a new forum on the Discussion board just for discussion one topics. You are encouraged to share thoughts, ask, and answer clarifying questions in this forum.
