IS 360 - Week 10 Assignment

Week 10 assignment is due end of day on Thursday April 2nd.

In this assignment, you're asked to establish a beachhead in the Tableau environment, by creating a Tableau workbook with three views.

After you've gone through the Getting Started video tutorial, you'll be ready to create some Tableau views of your own. You could start by creating a .CSV file from either the $flights$ database or the tb database. Alternatively, you may choose (or create) a different .CSV file. You should have at least two different dimensions (categorical variables) and at least one measure (numeric variable that you'll aggregate across the different dimensions) in your dataset (.CSV file).

Your task is to use this CSV file as your data source, and create a Tableau Workbook that includes three different views (sheets). Please submit:

1. Your CSV file, and
2. Your saved Tableau workbook.
